

PRACTICAL 1

Aim : Creating a Forensic Image using FTK Imager/Encase Imager :

- Creating Forensic Image
- Check Integrity of Data
- Analyze Forensic Image

➤ Creating Forensic Image

1. Click File, and then Create Disk Image, or click the button on the tool bar.

2. Select the source evidence type you want to make an image of and click Next.

3. Select the source evidence file with path .

Click on “add” to add image destination

The 'Evidence Item Information' dialog box is shown. It contains fields for 'Case Number' (1), 'Evidence Number' (1), 'Unique Description' (prac1), 'Examiner' (empty), and 'Notes' (empty). At the bottom are buttons for '< Back', 'Next >', 'Cancel', and 'Help'.

4. In the Image Destination Folder field, type the location path where you want to save the image file, or click **Browse** to find to the desired location.

Note: If the destination folder you select is on a drive that does not have sufficient free space to store the entire image file, FTK Imager prompts for a new destination folder when all available space has been used in the first location. In the Image Filename field, specify a name for the image file but do not specify a file extension.

5. After adding the image destination path click on finish and start the image processing.

6. After the images are successfully created, click Image Summary to view detailed file information, including MD5 and SHA1 checksums.

Analyze Forensic Image:

Click on Add Evidence Item to add evidence from disk, image file or folder.

Now select the source evidence type as image file.

Open the created evidence image file

Now select Evidence Tree and analyze the image file .

The screenshot shows the AccessData FTK Imager 3.4.2.6 interface. The top menu bar includes File, View, Mode, and Help. Below the menu is a toolbar with various icons for file operations. The main window is divided into several panes:

- Evidence Tree:** Shows a tree structure with a root folder "cprac1.ad1" and a subfolder "D:\tycs\ins\practical [AD1]."
- File List:** A table showing a list of files with columns for Name, Size, Type, and Date Modified. The files listed are:

- Custom Content Sources:** A pane showing evidence sources: "Evidence:File System|Path|File". It includes buttons for New, Edit, Remove, Remove All, and Create Image.
- Hex Editor:** A large pane at the bottom displaying hex dump of the file content. The dump starts with:

PRACTICAL 2

Aim: Data Acquisition:

- Perform data acquisition using:
- USB Write Blocker + FTK Imager

Steps:

Step 1: First Open Prodiscover Basic and start with new case.

Step 2: The created project appears in left pane and select add>capture & add image.

Step 3: fill the details as below. And click ok.

Step 4: capturing of image starts.

Step 5: Open the image created, go to Add > Images in left pane.

Step 6: Click on any File and type a comment.

Step 7 : the cluster view is seen from the cluster view in left panel.

Step 8 : We can also view gallery view by Right Click.

Step 9: Keyword search. Click on Search in left pane and Enter the file name to be searched in the image created.

Step 10 : Output of Keyword search.

Step 11 : Click on View>Report.

PRACTICAL 3

AIM :- Forensics Case Study : Solve the Case study (image file) provide in lab using Encase Investigator or Autopsy .

Step 1 : Open Autopsy

Step 2 : Click on new case

Step 3 : Enter details regarding the case and click on next button.

New Case Information

Steps

1. Case Information
2. Optional Information

Case Information

Case Name: Base Directory: Case Type: Single-user Multi-user
Case data will be stored in the following directory:

Step 5 : Now here we have to select Type of data source to add , in our case disk image or VM file and click on next

Step 6 : Now we have to select image file and click on next button

Step 7 : Now click on select all in order to Run ingest modules on: and click on next.

Step 8 : Now click on finish

Step 9 : Now Autopsy window will appear and it will analyse the disk that we have selected .

Step 10 : All image files appears in the Table tab. Select any file to see the data

Step 11 : Expand the tree from left side panel to view the document files.

The screenshot shows the Autopsy 4.8.0 interface. The left sidebar displays a tree view of data sources, views, results, and tags. The 'Data Sources' section shows 'anand.001' expanded, revealing '\$OrphanFiles (0)', '\$Unalloc (2)', and several deleted files like '_103359_(0)', '_269156_(0)', etc. The 'Views' section shows 'Deleted Files' expanded, with 'File System (8)' selected. The 'Results' section shows 'Extracted Content' and 'Keyword Hits' expanded, with 'Single Literal Keyword Search (0)' and 'Email Addresses (18)' selected. The main pane shows a table of files under the 'anand.001' data source. The file '_870109_(0)' is selected, highlighted with a blue border. The table has columns 'Name' and 'Location'. The 'Indexed Text' tab is selected in the bottom navigation bar, which displays the message 'No indexed text for this file.'

Step 12 : To recover the files , go to view code → Deleted files node , here select any file and right click on it then select Extract files option

The screenshot shows the Autopsy 4.8.0 interface. The left sidebar contains a tree view of data sources, including 'anand.001' which has '\$OrphanFiles', '\$Unalloc', '\$System Volume Information', and a 'databases' folder containing a file named 'high level pgmg lang.docx'. The main pane displays a table of files with columns 'Name' and 'Location'. A context menu is open over a file named 'f1597948.exe'. The bottom of the screen shows tabs for Hex, Strings, Application, Indexed Text, Message, File Metadata, Results, and Other Occurrences. The 'Indexed Text' tab shows 'No indexed text for this file.'

Step 12: Select Path where you want to save extracted file and click on save .

Step 13 : Now click on OK

Step 14 : Now go to C:\autopsy\case_prac00124\Export folder to see recover file

Step 15 : Click on generate report from Autopsy window and select the Excel format and click on next

Step 16 : This window will appear

Step 17 : Now report is generated so click on close button. We can see the Report on Report Node

Step 18 : Click on report

The Autopsy tool interface shows the generated Excel report in the "Listing" pane. The "Source Module Name" column lists "Excel Report", the "Report Name" column is empty, and the "Created Time" column shows "2019-02-05 10:35".

Source Module Name	Report Name	Created Time
Excel Report		2019-02-05 10:35

The left sidebar shows the "Reports" node selected. Other nodes include "Data Sources", "Views", "Results", and "Tags".

PRACTICAL 4

AIM : Capturing and analyzing network packets using Wireshark (Fundamentals) :

- Identification the live network
- Capture Packets
- Analyze the captured packets

Capturing Packets

Capture traffic on your wireless network, click your wireless interface. You can configure advanced features by clicking Capture > Options, but this isn't necessary for now.

As soon as you single-click on your network interface's name, you can see how the packets are working in real time. Wireshark will capture all the packets going in and out of our systems.

Promiscuous mode is the mode in which you can see all the packets from other systems on the network and not only the packets send or received from your network adapter. Promiscuous mode is enabled by default. To check if this mode is enabled, go to Capture and Select Options. Under this window check, if the

checkbox is selected and activated at the bottom of the window. The checkbox says “Enable promiscuous mode on all interfaces”.

The red box button “STOP” on the top left side of the window can be clicked to stop the capturing of traffic on the network.

Color Coding

Different packets are seen highlighted in various different colors. This is Wireshark’s way of displaying traffic to help you easily identify the types of it. Default colors are:

Light Purple color for TCP traffic

Light Blue color for UDP traffic

Black color identifies packets with errors – example these packets are delivered in an unordered manner.

To check the color coding rules click on View and select Coloring Rules. These color coding rules can be customized and modified to fit your needs.

Analyze the captured Packets:

First of all, click on a packet and select it. Now, you can scroll down to view all its details.

Filters can also be created from here. Right-click on one of any details. From the menu select Apply as Filter drop-down menu so filter based on it can be created.

Display filter command –

PRACTICAL 5

Aim :- Analyze the packets provided in lab and solve the questions using Wireshark :

- What web server software is used by www.snopes.com?
- About what cell phone problem is the client concerned?
- According to Zillow, what instrument will Ryan learn to play?
- How many web servers are running Apache?

1. What web server software issued by www.snopes.com?

Analysis – The domain name be found from host header so we will set host header column where we will see all domain name. Select any HTTP request and expand the Hypertext Transfer Protocol then right click on Host header and then Apply as Column.

Now we can see our host www.snopes.com in host column.

27 0.000002000	66.165.133.65	192.168.1.71	TCP	1514	

Right click on the selected packet and then select Follow TCP stream.

Now we can see the webserver name in server header it is Microsoft IIS 5.0

2. About what cell phone problem is the client concerned?

Analysis – Client talking about cell so we search for cell keyword in whole packets. We will use regular express for searching the cell keyword. Apply frame matches “(?! cell”

The screenshot shows the Wireshark interface with a packet list. A search bar at the top contains the filter expression: "frame matches \"(?! cell\"". The table below lists network traffic with columns for No., Time, Source, Destination, Protocol, Length, and Host.

After applying the filter, we found only one packet with the Zillow keyword

Select the packet and expand the Hypertext Transfer Protocol tab right click on it go to Protocol Preferences and check Allow subdissector to reassemble TCP stream.

Now go to file and select Export Objects > HTTP. It will save all objects from the packet.

Click on save all.

After saving all files in a directory and we found a swf file with name Zillow. After opening the flash file, we saw that Zillow was trying to learn saxophone.

4. How many web servers are running Apache?

Analysis – The web server name can be retrieved from HTTP response header. So will apply filter http.response and we can see all http response packets.

Now we will set the server header as column select any packet and right click on it then select Apply as Column.

Now can see the server column where all server name is showing.

Now we have to check how many Apache packets are there we can't count manually for each packet so we will apply another filter http.server contains "Apache"

After applying filter go to Statistics > Endpoints

The screenshot shows the Wireshark interface with a green header bar containing the filter: "http.server contains \"Apache\"". Below the header is a table of network packets. To the right of the table is the "Statistics" menu, which is currently open. The "Endpoints" option is highlighted with a red box. Other options in the menu include "Summary", "Comments Summary", "Show address resolution", "Protocol Hierarchy", "Conversations", "Packet Lengths...", "IO Graph", "Conversation List", "Endpoint List", "Service Response Time", "29West", "ANCP", "BACnet", "Collectd...", "Compare...", and "Flow Graph...".

It will show all connections

Name resolution Limit to display filter

CONCLUSION: We have successfully analyzed the packets provided and solved the questions using wireshark.

PRACTICAL 6

Aim :- Using Sysinternals tools for Network Tracking and Process Monitoring :

- Check Sysinternals tools
- Monitor Live Processes
- Capture RAM
- Capture TCP/UDP packets
- Monitor Hard Disk
- Monitor Virtual Memory
- Monitor Cache Memory

➤ **Check Sysinternals tools :** Windows Sysinternals tools are utilities to manage, diagnose, troubleshoot, and monitor a Microsoft Windows environment.

The following are the categories of Sysinternals Tools:

1. File and Disk Utilities
2. Networking Utilities
3. Process Utilities
4. Security Utilities
5. System Information Utilities
6. Miscellaneous Utilities

➤ **Monitor Live Processes : (Tool: ProcMon)**

To Do:

1. Filter (Process Name or PID or Architecture, etc)
 2. Process Tree
 3. Process Activity Summary
 4. Count Occurrences
-

Output:

The screenshot shows the main Process Monitor window titled 'Process Monitor - Sysinternals: www.sysinternals.com'. The menu bar includes File, Edit, Event, Filter, Tools, Options, and Help. The toolbar contains various icons for file operations. The main pane displays a table of events. The columns are Time ..., Process Name, PID, Operation, Path, Result, and Detail. The table shows several entries for the process 'chrome.exe' with PID 5236, performing operations like CreateFile, QueryDirectory, and CloseFile on paths such as 'C:\Users\COM-3\AppData\Local\Googl...' and 'C:\Users\COM-3\AppData\Local\Temp\...'. The 'Result' column shows 'SUCCESS' for most entries, except for one entry where it says 'NO MORE FILES'. The 'Detail' column provides detailed information about the access rights and disposition for each operation. At the bottom, status bars indicate 'Showing 1303 of 179857 events (0.72%)' and 'Backed by virtual memory'.

Aim :- Email Forensics

- Mail Service Providers
 - Email protocols
 - Recovering emails
 - Analyzing email header
-

FTK can filter or find files specific to e-mail clients and servers. You can configure these filters when you enter search parameters.

Because of Jim's responses to a poor performance review, the CEO of Superior Bicycles, Martha Dax, suspects he might have obtained sensitive information about the company's business model that he's leaking to a competitor.

Martha asked her CIO, to have an IT employee copy the Outlook .pst file from Jim Shu's old computer to a USB drive.

To process this investigation, we need to examine the Jim_shu's.pst file, locate the message, and export it for further analysis of its header to see how Jim might have received it.

Recovering Email

Start AccessData FTK and click **Start a new case**, then click **OK**. Click **Next** until you reach the **Refine Case - Default** dialog box Click the **Email Emphasis** button , and then click **Next** .

Click **Next** until you reach the **Add Evidence to Case** dialog box, and then click the **Add Evidence** button.

In the Add Evidence to Case dialog box, click the **Individual File** option button, and then click **Continue**.

In the **Select File** dialog box, navigate to your work folder, click the **Jim_shu's.pst** file, and then click **Open**.

When the **Add Evidence to Case** dialog box opens, click **Next**. In the **Case summary** dialog box, click **Finish**.

When FTK finishes processing the file, in the main FTK window, click the **E-mail Messages** button, and then click the **Full Path** column header to sort the records.

PRACTICAL 10

Aim: Web Browser Forensics .

- Web Browser working
- Forensics activities on browser
- Cache / Cookies analysis
- Last Internet activity

Steps:

1. Open BrowserHistoryExaminer.

2. Click on file > Capture History

3. Select the capture folder and click on next.

4. Enter the destination to capture the data.

5. The History is been extracting.

6. The data has been retrieved.

The screenshot shows the 'Browser History Examiner - Trial Mode' interface. The left panel lists various artifacts with their counts: Bookmarks (8), Cached Files (4615), Cached Images (177), Cached Web Pages (36), Cookies (1566), Downloads (80), Email Addresses (30), Favicons (1790), Form History (31), Logins (3), Searches (1184), Session Tabs (62), Thumbnails (12), and Website Visits (2688). The 'Website Visits' tab is selected, displaying a table of visit records and a bar chart titled 'Website Visit Count - 17-03-2019 to 18-03-2019'. The chart shows a single large blue bar for March 17, 2019, reaching a value of 13, and a much smaller bar for March 18, 2019, reaching a value of 12. The right side of the interface contains four filter panels: 'Filter by keyword', 'Filter by date', 'Filter by time', and 'Filter by web browser'. The bottom status bar indicates the URL 'www.foxtonforensics.com', the time zone 'UTC, DST Enabled', and the date format 'dd/mm/yyyy'.

7. On the left panel click on bookmarks.

The screenshot shows the 'Browser History Examiner - Trial Mode' interface with the 'Bookmarks' tab selected in the left panel. The table displays eight bookmark entries, each with a star icon, a date added, a last modified date, a title, a URL, and a web browser. The columns are labeled: Date Added, Last Modified, Title, URL, and Web Browser. The entries are: Getting (https://) in Firefox (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01), Help ar (https://) in Firefox (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01), Custom (https://) in Firefox (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01), Get Inv (https://) in Firefox (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01), About l (https://) in Firefox (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01), New Ta chrome (Chrome) (Date Added: 14-03-2019 05:01:05, Last Modified: 22-01-2019 06:40:50), Downlc (https://) in Chrome (Date Added: 14-03-2019 05:01:05, Last Modified: 22-01-2019 06:40:50), and Bing (http://) in Internet Explorer (Date Added: 17-03-2019 09:03:01, Last Modified: 17-03-2019 09:03:01). The right side of the interface contains four filter panels: 'Filter by keyword', 'Filter by date', 'Filter by time', and 'Filter by web browser'. The bottom status bar indicates the URL 'www.foxtonforensics.com', the time zone 'UTC, DST Enabled', and the date format 'dd/mm/yyyy'.
